

How to Tell Wild Animals.Question & Answer.

Q → Look at the line: "A novice might nonplus,"
 How would you write this correctly? Why is the poet's 'incorrect' line better in the poem?

Ans → The correct order of the sentence is 'a novice might be nonplussed'. The poet wrote it in order to bring rhyme to her poem, 'non-plus' rhymes with 'thus'.

Q → Much of the humour in the poem arises from the way language is used, although the ideas are funny as well. If there are particular lines in the poem that you especially like, share these with the class, speaking briefly about what it is about the ideas or the language that you like to find funny?

Ans → Yes, it is true that the poet has used the language in a way that it arises humour. The poet has used many lines that are funny. One such is 'If he roars at you as you're begin'. You'll know it is Asian lion or the other one is 'A noble wild beast greets you'. So his idea of explaining the characteristics of

The world animals is quite funny.

Jawara The Storyteller Part-4
by R.K. Laxman

Long Question:-

Q.1) Mahendra calls ghosts or spirits a fragment of the imagination, what happens to him on a full-moon night?

Ans

Mahendra calls ghosts or spirits a fragment of the imagination because Jawara informed him that they were living on a burial site. and kept narrating to him stories of various ghosts. He himself had encountered. On one full moon night, Mahendra was woken up from his sleep by a low moan close to his window. At first he thought that it was a cat prowling around for mice. But the sound was too deep and far for a cat. He resisted looking outside as he did not want to witness a sight that might stop his heart beat. But the crying became louder. He could not resist the temptation any more. Lowering himself to the level of the window sill, he looked out of the white sheet of moonlight outside. There not too far away, was a dark cloudy form clutching a bundle. He broke into a cold sweat and

GRADE 8A & 8CSUBJECT - ENGLISHSECTION - 13 (WRITING)LETTER WRITING.

✓

A letter is a written message that can be handwritten or printed on paper. It is usually sent to the recipient via mail or post in an envelope, although this is not a requirement as such. Any such message that is transferred via post is a letter. A written conversation between two parties.

* Letter writing is one of the very effective modes of communication. Letters can be:

1. Personal - to friends or relatives
2. Business - placing and receiving orders, complaints etc.

will be distributed in the ratio of appropriation :-

	Interest on Capital	:	Salary
Or	1,20,000	:	90,000
Or	4	:	3

ILLUSTRATION 24.

Shreya and Vivek were partners in a firm sharing profits in the ratio 3 : 2. The balances in their capital and current accounts as on 1st April, 2017 were as under :

	Sherya (₹)	Vivek (₹)
Capital Accounts	5,00,000	2,50,000
Current Accounts	1,00,000 (Cr.)	28,000 (Dr.)

The partnership deed provided that Shreya was to be paid a salary of ₹5,000 p.m. whereas Vivek was to get a commission of ₹30,000 for the year.

Interest on capital was to be allowed @ 8% p.a. whereas interest on drawings was to be charged @ 6% p.a. The drawings of Shreya were ₹15,000 drawn on 10th September 2017 while Vivek withdrew ₹10,000 on 1st September, 2017. The net profit of the firm for the year before making the above adjustments was ₹1,20,000.

Prepare Profit and Loss Appropriation Account and Partner's Capital and Current Accounts. (C.B.S.E. 2019, Chennai, Modified)

population with food, education and access to health facilities. When the existing 'human resource' is further developed by becoming more educated and healthy, we call it 'human capital formation' that adds to the productive power of the country just like 'physical capital formation'.

Investment in human capital (through education, training, medical care) yields a return just like investment in physical capital. This can be seen directly in the form of higher incomes earned because of higher productivity of the more educated or the better trained persons, as well as the higher productivity of healthier people.

India's Green Revolution is a dramatic example of how the input of greater knowledge in the form of improved production technologies can rapidly increase the productivity of scarce land resources. India's IT revolution is a striking instance of how importance of human capital has come to acquire a higher position than that of material, plant and machinery.

Teacher's Name. Sagun Zaver.

Secondary Sector

Secondary sector of the economy or industrial sector includes those economic activities that create a finished, tangible product. This includes manufacturing and construction. Here, a natural products are changed into other forms through manufacturing which may take place in a factory, workshop or at home. Examples are yarn and cloth weaving from cotton, sugar or gur from sugarcane etc. Since the development in Secondary sector became associated with different kinds of industries, it is also called industrial sector.

Tertiary Sector

The activities that help in the development of primary and secondary sector are covered in Tertiary sector. These activities do not produce goods, but they provide services that support the production process. e.g. transport, storage, communication, banking etc, this also known as service sector.

It also includes some essential services provided by professionals e.g. doctors, lawyers,

ECONOMICS11-2 SECTORS OF THE INDIAN ECONOMYSectors of Economic Activities

The activities which are conducted with the objective to earn money are called Economic Activities. Some of these activities produce goods and others produce services. Activities are classified in various groups according to their common attributes, which are known as sectors.

Economic activities can be classified in three different ways.

- i) Primary, Secondary and Tertiary sector
- ii) Organised and Unorganised sector
- iii) Public and Private sector.

Primary, Secondary and Tertiary SectorPrimary Sector

Primary sector of the economy involves conversion of natural resource into primary products. Thus, this sector is directly associated with nature. This includes agriculture, forestry, fishing, mining and extraction of oil and gas. Since most of the natural products are obtained from agriculture, dairy, fishing, forestry etc. It is also called agricultural and related sector.

ECONOMICSCHAPTER 2 PEOPLE AS RESOURCEIntroduction

'People as Resource' is an effort to explain population as an asset for the economy rather than a liability. Population becomes human capital when there is investment made in the form of education, training and medical care. In fact, human capital is the stock of skill and productive knowledge embodied in them.

Human capital contribute to the creation of the Gross National Product (GNP)

GNP is the total value of goods and services produced within a nation in a particular year. The income earned by it citizens (including income of those worked abroad) minus income of non-residents located in that country.

Like other resources population also is a resource - a 'human resource'.

This is the positive side of a large population that is often overlooked when we look only at the negative side, considering only the problem of providing the

Teachers, barbers etc and information technology such as software industry, internet cafe, ATM booths, Business Process Outsourcing (BPO), Knowledge Process Outsourcing (KPO) and call centres.

Teacher's Name: Saquib Zavar

They are microporous aluminosilicates with three dimensional network of Si-O-Si in which some silicon atoms are replaced by aluminium atoms giving Al-O-Si bonds. Zeolites are long, very widely used as catalysts in petrochemical industries for cracking of hydrocarbons and isomerization. Such a catalysts are highly specific because molecules of only particular size and shape can enter these pores and get absorbed.

An important zeolite used in petrochemical industries is ZSM-5 which converts alcohol directly into gasoline (petrol) by dehydrating them to give a mixture of hydrocarbons.

Principles of Inheritance and Variation

→ The scientific study of heredity (character) & variation is called genetics.

→ Process of transmission of traits/characters from parent to their progeny/offspring or from one generation to the next generation is called heredity or inheritance.

→ Differences in characters/traits of individuals of same species is called variation.

→ The branch genetics established in 1866.

→ The term "Genetics" got used by Bateson.

→ Gregor Johann Mendel known as father of genetics.

→ Mendel use the term "factor" for gene.

→ The term gene was used by Johann von von.

→ Some important terms:

→ Allele: = $\frac{TT}{tt}$ where T is dominant and t is recessive.

→ Alternative form of a gene is called allele.

→ Dominant =

→ Allele/gene which able to express itself is called dominant.

→ expressed trait is called dominant trait.

→ It is always represented by capital letters

i.e. TT, RR, YY

→ Recessive =

→ The allele/gene due to which traits are suppressed is called recessive.

→ It is always denoted by small letters i.e. tt, rr, yy

→ Homozygous =

→ Both alleles of a gene are similar to each other: TT, RR, YY - dominant homozygous

Chapter - 6 The Triangle and its Properties

Triangle - A fig. formed by three line segment is called a Triangle.

Here is $\triangle ABC$

There are six elements in a \triangle (triangle)
3 Sides and 3 angles

Sides - \overline{AB} , \overline{BC} , \overline{CA}

Angles $\angle BAC$, $\angle ABC$, $\angle ACB$

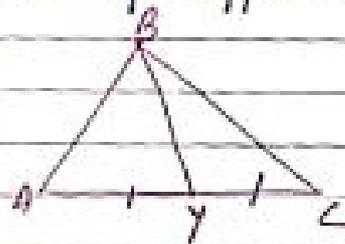

Vertex - The meeting points of a pair of sides of a \triangle is called vertex

Thus A, B, C are three vertices of a \triangle

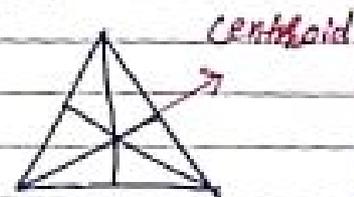

Medians of a Triangle \rightarrow A median of a triangle is a segment that joins a vertex to of the \triangle to the $\&$ midpoint of the ~~op~~ opposite side

In the give fig. BY is the median of a \triangle

$$\therefore AY = YC$$

There are three medians of a \triangle

Surface Area of Volume→ Question based on Right Circular Cone.

Q. A right triangle ABC with sides 5 cm, 12 cm, and 13 cm is revolved about the side 12 cm, ~~then~~ find the volume of the solid so obtained.

Solⁿ: AC = 12 cm
 AB = 13 cm
 BC = 5 cm

The right angled Δ is revolved about the side 12 cm.

Then, $r = 5$ cm

$h = 12$ cm

Volume of the cone = $\frac{1}{3} \pi r^2 h$

$$= \frac{1}{3} \times \pi \times 5^2 \times 12$$

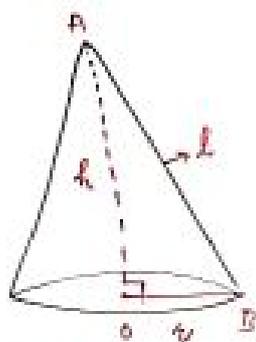

$$= 25\pi \times 4 = 100\pi \text{ cm}^3$$

\therefore Required volume of cone is $100\pi \text{ cm}^3$

Ex² In ΔABC in the above question is revolved about the side 5 cm, then find the volume of the solid so obtained. Find also the ratio of the volumes of two solids obtained in question this and above question.

Cone:

Maths

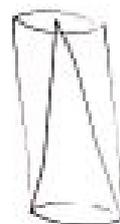

- OA = Height (h)
 - OB = Base Radius (r)
 - AB = Slant height (l)
- $$l = \sqrt{h^2 + r^2}$$

Volume = $\frac{1}{3} \pi r^2 h$ cubic unit

C.S.A = $\pi r l$ sq unit

T.S.A = C.S.A + Area of Base
= $\pi r l + \pi r^2$
= $\pi r (l + r)$ Sq unit

Lesson name - The Bubble, the Straw and the Shoe

Content

The story is about three friends. The Bubble, the Straw and the Shoe. One day they were passing through a forest they came near to a river how to cross it finally they decided to cross the river with the help of straw. The straw stretched it self from bank to the river first. The shoe landed on the straw and broke it Bubble shoe with laughter and burst in a big round.

This ~~poem~~ story is written by - Alexei Tolstoy

Let's know basic word and their meanings from this story.

1. Bubble - A round hollow shaped body formed with liquid.
2. Straw - A dry stalk.
3. Shoe - The footwear.
4. Forest - A large track of trees.
5. River - A moving water body.
6. Cross - Go through
7. Float - To move on water.
8. Stretch - To make longer.
9. Bank - The side of the river.

H.w Read the story carefully.
Write one page writing.

Nishat Petween

The Bubble, the Straw and the Shoe

Listen and enjoy this story

Once upon a time there lived a Bubble, a Straw and a Shoe.

One day they went into the forest.

They came to a river. They did not know how to cross it.

The Shoe said, "Bubble, let us float on you."

"No, Shoe! Let Straw stretch himself from one bank to the

other. Then we can cross the river."

So, the Straw stretched himself from one bank to the other. When the Shoe jumped on the Straw, it broke. The Shoe fell into the water with a loud splash.

The Bubble shook and shook with laughter and burst with a big bang.

اپنی ورد آپ

رات بھر بارش ہوتی رہی۔ صبح گلی میں کچھڑ تھی۔ گلی میں کچھڑ کی وجہ سے تین بچے پھسل کر گر گئے۔ ان کو جو تیس بھئی آئی تھیں۔ ایک بچے کا تو سر پھٹ گیا۔ اسے ڈاکر کے پاس لے گئے۔ زاہد اور ناصر نے جھاڑو اور پیلے کی مدد سے کچھڑ صاف کر دیا۔ سوچیے، بتائیے اور لکھیے۔

i۔ سوال۔ گلی میں کچھڑ کی وجہ سے کیا حادثے ہوئے؟

ii۔ سوال۔ زاہد اور ناصر نے کچھڑ صاف کرنے کرنے کے لیے کیا کیا؟

iii۔ سوال۔ خوش خط لکھیے۔ (One page writing)

ایک دوسرے کو بُرائی سے روکو۔

6. SQUARES & SQUARE ROOTS

⇒ Squares: $a^2 = a \times a$ where 'a' is natural number
 ex $2^2 = 2 \times 2 = 4$
 $3^2 = 3 \times 3 = 9$
 $4^2 = 4 \times 4 = 16$
 $5^2 = 5 \times 5 = 25$

Properties of Square Numbers.

<u>Number</u>	<u>Square</u>	<u>Number</u>	<u>Square</u>
1	1	11	121
2	4	12	144
3	9	13	169
4	16	14	196
5	25	15	225
6	36	16	256
7	49	17	289
8	64	18	324
9	81	19	361
10	100	20	400

→ Can we say that if a number end in 0, 1, 4, 5, 6 or 9, then it must be a square number.

~~eg~~ 100
